

CASE STUDY

Client: Prolift

Product: X-Series

“ YOUNGMAN
OFFERED
THE BEST OF
PERFORMANCE,
LIGHTNESS,
MAINTENANCE
AND PARTS
INTERCHANGE
ABILITY ”

Andy Pearson
Managing Director
Prolift

THE CHALLENGE

Youngman were asked to provide a suitable powered access product to Prolift Access which could meet the strong demand for a product which has scissor lift capability and allows the user to tackle a variety of low level tasks both indoors and out.

THE BRIEF

Through access solutions provider Access Platform Sales (APS) our brief was to supply Prolift Access with an ultra-compact machine offering performance, lightness, ease of maintenance and parts interchangeability for customers across a number of industry sectors including heating and ventilation as well as electrical contractors.

THE SOLUTION

The top-of-the-range BoSS X3X-SP model weighs in at just 495 kg and has a maximum working height and safe working load of 5.14 m and 150 kg respectively and, thanks to an overall width of just 0.76 m, can easily pass through a standard doorway.

This made BoSS X3X-SP the perfect solution for many high level repairs, maintenance and installation tasks across Prolift's ever increasing customer base. Additionally, Prolift Access also purchased through APS the BoSS X3X model, providing customers with a more traditional push around scissor lift.
